This collection of forty new essays, written by the leading scholars in adaptation studies and distinguished contributors from outside the field, is the most comprehensive volume on adaptation ever published. Written to appeal alike to specialists in adaptation, scholars in allied fields, and general readers, it hearkens back to the foundations of adaptation studies a century and more ago, surveys its ferment of activity over the past twenty years, and looks forward to the future. It considers the very different problems in adapting the classics, from the Bible to Frankenstein to Philip Roth, and the commons, from online mashups and remixes to adult movies. It surveys a dizzying range of adaptations around the world, from Latin American telenovelas to Czech cinema, from Hong Kong comics to Classics Illustrated, from Bollywood to zombies, and explores the ways media as different as radio, opera, popular song, and videogames have handled adaptation. Going still further, it examines the relations between adaptation and such intertextual practices as translation, illustration, prequels, sequels, remakes, intermediality, and transmediality. The volume's contributors consider the similarities and differences between adaptation and history, adaptation and performance, adaptation and revision, and textual and biological adaptation, casting an appreciative but critical eye on the theory and practice of adaptation scholars—and, occasionally, each other. The Oxford Handbook of Adaptation Studies offers specific suggestions for how to read, teach, create, and write about adaptations in order to prepare for a world in which adaptation, already ubiquitous, is likely to become ever more important.

Handbook of Research on Transnational Higher Education

Language pervades everything we do as social beings. It is, in fact, difficult to disentangle language from social
life, and hence its importance is often missed. The emergence of new communication technologies makes this even more striking. People come to "know" one another through these interactions without ever having met face-to-face. How? Through the words they use and the way they use them. The Oxford Handbook of Language and Social Psychology is a unique and innovative compilation of research that lies at the intersection of language and social psychology. Language is viewed as a social activity, and to understand this complex human activity requires a consideration of its social psychological underpinnings. Moreover, as a social activity, the use and in fact the existence of language has implications for a host of traditional social psychological processes. Hence, there is a reciprocal relationship between language and social psychology, and it is this reciprocal relationship that defines the essence of this handbook. The handbook is divided into six sections. The first two sections focus on the social underpinnings of language, that is, the social coordination required to use language, as well as the manner in which language and broad social dimensions such as culture mutually constitute one another. The next two sections consider the implications of language for a host of traditional social psychological topics, including both intrapersonal (e.g., attribution) and intergroup (e.g., intergroup relations) processes. The fifth section examines the role of language in the creation of meaning, and the final section includes chapters documenting the importance of the language-social psychology interface for a number of applied areas.

The Oxford Handbook of the Development of Imagination

In line with the overall perspective of the Handbook series, the focus of Vol.9 is on language-related problems arising in the context of linguistic diversity and change, and the contributions Applied Linguistics can offer for solutions. Part I, "Language minorities and inequality," presents situations of language contact and linguistic
diversity as world-wide phenomena. The focus is on indigenous and immigrant linguistic minorities, their (lack of) access to linguistic rights through language policies and the impact on their linguistic future. Part II “Language planning and language change,” focuses on the impact of colonialism, imperialism, globalisation and economics as factors that language policies and planning measures must account for in responding to problems deriving from language contact and linguistic diversity. Part III, “Language variation and change in institutional contexts,” examines language-related problems in selected institutional areas of communication (education, the law, religion, science, the Internet) which will often derive from socioeconomic, cultural and other non-linguistic asymmetries. Part IV, “The discourse of linguistic diversity and language change,” analyses linguistic diversity, language change and language reform as issues of public debates which are informed by different ideological positions, values and attitudes (e.g. with reference to sexism, racism, and political correctness). The volume also contains extensive reference sections and index material.

**New Turkish Handbook for English Speakers**

This volume offers a thorough, systematic, and crosslinguistic account of evidentiality, the linguistic encoding of the source of information on which a statement is based. In some languages, the speaker always has to specify this source - for example whether they saw the event, heard it, inferred it based on visual evidence or common sense, or was told about it by someone else. While not all languages have obligatory marking of this type, every language has ways of referring to information source and associated epistemological meanings. The continuum of epistemological expressions covers a range of devices from the lexical means in familiar European languages and in many languages of Aboriginal Australia to the highly grammaticalized systems in Amazonia or North America. In this handbook, experts from a variety of fields explore topics such as the relationship between evidentials and epistemic modality, contact-induced changes in evidential systems, the acquisition of evidentials, and formal semantic theories of evidentiality. The book also contains detailed case studies of evidentiality in language families across the world, including Algonquian, Korean, Nakh-Dagestanian, Nambikwara, Turkic, Uralic, and Uto-Aztecan.

Handbook of Categorization in Cognitive Science, Second Edition presents the study of categories and the process of categorization as viewed through the lens of the founding disciplines of the cognitive sciences, and how the study of categorization has long been at the core of each of these disciplines. The literature on categorization reveals there is a plethora of definitions, theories, models and methods to apprehend this central object of study. The contributions in this handbook reflect this diversity. For example, the notion of category is not uniform across these contributions, and there are multiple definitions of the notion of concept. Furthermore, the study of category and categorization is approached differently within each discipline. For some authors, the categories themselves constitute the object of study, whereas for others, it is the process of categorization, and for others still, it is the technical manipulation of large chunks of information. Finally, yet another contrast has to do with the biological versus artificial nature of agents or categorizers. Defines notions of category and categorization Discusses the nature of categories: discrete, vague, or other Explores the modality effects on categories Bridges the category divide - calling attention to the bridges that have already been built, and avenues for further cross-fertilization between disciplines

Area Handbook for the Republic of Turkey

The Oxford Handbook of Language Production provides a comprehensive, multidisciplinary review of the complex mechanisms involved in language production. It describes what we know of the computational, linguistic, cognitive, and brain bases of human language production - from how we conceive the messages we aim to convey, to how we retrieve the right (and sometimes wrong) words, how we form grammatical sentences, and how we assemble and articulate individual sounds, letters, and gestures. Contributions from leading psycholinguists, linguists, and neuroscientists offer readers a broad perspective on the latest research, highlighting key investigations into core aspects of human language processing. The Handbook is organized into three sections: speaking, written and sign languages, and how language production interfaces with the wider cognitive system, including control processes, memory, non-linguistic gestures, and the perceptual system. These chapters discuss a wide array of levels of representation, from sentences to individual words, speech sounds and articulatory gestures, extending to discourse and the broader social context of speaking. Detailed supporting chapters provide an overview of key issues in linguistic structure at each level of representation. A authoritative yet concisely written, the volume will be of interest to scholars and students working in cognitive psychology, psycholinguistics, cognitive neuroscience, computer science, audiology, and education, and related fields.
